github.com/zubairahamad06 | zubairahamadportfolio.netlify.app | Chennai, India

CAREER OBJECTIVE

Python Full Stack Developer with 1 year of professional experience building responsive, component-based front-end applications and expanding into backend development with Python, Django, and REST APIs. Hands-on experience converting UI/UX designs into scalable, production-ready interfaces using React.js, JavaScript (ES6+), HTML5, and CSS3, with growing proficiency in server-side development, relational database design, and API integration. Strong foundation in Object-Oriented Programming, MVC architecture, Git/GitHub version control. Seeking to leverage full stack skills to build scalable, high-quality web applications in a fast-paced engineering team.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), HTML5, CSS3

Frontend Technologies: React.js, React Hooks, React Router, Bootstrap, Responsive Web Design, Redux (basics)

Backend Technologies: Python, Django, REST API / RESTful Web Services, Node.js (basics)

Database: MySQL, PostgreSQL (basics), MongoDB (basics), SQL

Version Control & Tools: Git, GitHub, VS Code, PyCharm, Postman, npm

Core Concepts: OOPS, Data Structures & Algorithms, MVC Architecture, DBMS, JWT Authentication, API Integration

Deployment & Other Tools: Netlify, Heroku (basics), Docker (basics), CI/CD fundamentals

Design Software: Figma, Adobe XD, Photoshop, Canva

PROFESSIONAL EXPERIENCE

Full Stack Developer, Zukun Academy LLP

August 2025 – Present

- Design and develop responsive, user-friendly UI components using HTML, CSS, JavaScript, and React.js for live client-facing web applications.
- Build and consume REST APIs using Python and Django to connect React front ends to backend services and MySQL-backed data sources.
- Convert UI/UX designs (Figma) into pixel-accurate, functional web pages, ensuring cross-browser and cross-device compatibility.
- Integrate dynamic data from backend APIs into React components, handling both front-end rendering and back-end data flow for new features.
- Build and maintain reusable, component-based UI architecture to reduce development time on new features by improving code reuse.
- Design and modify MySQL database schemas to support new application features, ensuring data integrity across the stack.
- Optimize page load performance and implement mobile-first responsive layouts, improving usability across devices.
- Contribute to end-to-end feature delivery — from database schema design and API development through to React UI implementation — deepening hands-on full stack development experience across the application lifecycle.

PROJECTS

Corporate Website – JSE Engineering Pvt. Ltd. | *React.js, Python, Django, REST API, MySQL, HTML5, CSS3*

- Delivered a large-scale corporate website for JSE Engineering Pvt. Ltd., a civil engineering firm serving major industrial and infrastructure clients, as part of a team project covering the full build from architecture to deployment.
- Built a multi-page, SEO-ready corporate platform focused on performance, scalability, and strong digital brand presence for the client.

- Developed a Django + REST API backend to serve dynamic content (services, ongoing projects, inquiries) to a React.js front end, replacing static content with a maintainable data-driven structure.
- Implemented client-side routing and reusable React components for smooth, single-page-application-style navigation across service and project pages.
- Modeled and structured a relational MySQL database to store company services, project case studies, and contact/inquiry form submissions.
- Collaborated directly with stakeholders and team members on scope planning, solution architecture, and iterative improvements based on business feedback.

Z-Spaces – Interior Designers Portfolio & Booking Platform | *React.js, Django, REST API, MySQL, Bootstrap*

- Built a full-stack portfolio and lead-generation website for an interior design studio, showcasing project galleries, service packages, and design categories.
- Developed a Django REST API backend to manage portfolio entries, testimonials, and consultation-booking requests, with MySQL as the persistence layer.
- Implemented a dynamic, filterable project gallery (by room type/style) using React state management and reusable card components.
- Created a consultation-booking form with client-side validation and backend storage, enabling structured capture of lead details for follow-up.
- Designed a fully responsive, image-heavy layout optimized for fast loading using lazy-loading and compressed assets.
- Structured the codebase using component-based architecture and RESTful conventions to keep the frontend and backend independently maintainable.

Fitz Online – Full Stack Clothing E-Commerce Platform | *React.js, Python (Django), REST API, MySQL, JWT*

- Developed a full-stack e-commerce web application for online clothing sales, with React.js on the frontend and Python (Django) powering the backend.
- Built core modules including product catalog with category/size/price filters, shopping cart, wishlist, and checkout flow.
- Designed RESTful APIs for product listing, cart management, and order processing, enabling smooth data exchange between frontend and backend.
- Implemented user authentication and session handling using JWT to secure user accounts and order history.
- Created a normalized MySQL schema to manage products, inventory, users, and orders with proper relational integrity.
- Built a lightweight admin view for managing product listings and order status, supporting basic inventory and order-tracking workflows.

EDUCATION

B.E, Computer Science and Engineering — Sethu Institute of Technology, Kariyapatti, Madurai

2020 – 2024

CERTIFICATIONS & AWARDS

- Full Stack Web Development Certificate — Web D School, Chennai (March 2025): Completed intensive full-stack training with hands-on, real-time projects covering frontend, backend, and database integration.
- Strengthened coding, debugging, and problem-solving skills through practical, project-based learning.
